Why did you change, or maintained, your decision between the 1st and 3rd section?

Wanted to do loss aversion first time, but decided to go with the highest expected value second time

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision for gamble #2 because I will get a ~~the~~ little extra money if I win. and I will not lose too much compared to gamble ~~the~~ #1. Although picking gamble #1 is the best decision if I can only do this game once, I still decided to take some risk for a higher potential return.

Why did you change, or maintained, your decision between the 1st and 3rd section?

~~The~~ chance of getting a higher payout compared to the 1st section's choice

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There are approximately 20 lines visible. The paper appears to be a standard notebook page.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision because I did not want
to choose the bigger risk of getting even.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision between the 1st and the 3rd section because gamble 1 is the safest gamble to choose.

Why did you change, or maintained, your decision between the 1st and 3rd section?

50% probability odd or even, so more willing to take risks.
benefit > costs in choosing different gamble.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision (#3) for both sections because I felt as though it was a little bit of a gamble for more points without risking getting close to nothing. Higher than 3 I couldn't justify because I would walk away with ~~something~~ less than 20 50% of the time. Option 3 seemed safe.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I kept my decision at decision 6 on both the first and third section because I'd rather "go big or go home." I figured that I am fine taking the \$0.30 risk if there is an equal chance of me getting a lot more money.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed because I did not fully understand
the rules of the experiment and 20 oop is also
20 even, it felt safe.

Why did you change, or maintained, your decision between the 1st and 3rd section?

Maintained decision because even though gamble 3 doesn't have highest expectation value of payoff, I didn't want the higher standard deviation associated with the "optimal" choice, since my actual payoff is only going to happen once.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision from Gamble 4 in Section 1 to Gamble 6 in Section 3, not for any logical reason but because I decided to take a bigger risk completely arbitrarily.
