Why did you change, or maintained, your decision between the 1st and 3rd section?

I don't remember my first choice but I think I stood with a similar answer. I think this is due to my results from the pre-trial and main trial.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision to one gamble higher because when I was rolling the dice for section 2, I rolled a good amount of odd numbers so ~~there~~ I wanted to see if that odd number rolling 1 will roll over into my payment and however I will receive.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I ended up choosing a different gamble because I didn't mind the risk of losing out on 100¢. I also wanted to choose gambles that would still offer a decent profit because I also wanted to see my probability of getting one or the other. I think if I just maintained my decision, it wouldn't be as interesting or fun at the profit stage of the experiment.

Why did you change, or maintained, your decision between the 1st and 3rd section?

My instinct after seeing so many odd, and therefore higher gaining, results was to switch my bet to gamble 6. However, there is still a 50/50 chance, and my past results don't change the future outcome. I don't want to risk leaving with only 30 cents, even if the other possible outcome is very tempting. So I'm sticking with the low-risk option. I think you guys are studying gambling, and how repeated exposure affects gamblers risk-taking mindset.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I maintained my decision between the 1st & 3rd section because I thought it was the most probable one with the least risk. I considered choosing gamble 1 because the payoff was the same for odd or even, but I preferred gamble 2 since the difference in payoff was minimal, but still provided the opportunity for a higher payoff. The other gambles, such as gamble 6, were much too risky for me. Due to the large difference between gamble 6's payoffs, it did not seem reasonable to choose this. I also did not want to leave such a thing up to chance.

Why did you change, or maintained, your decision between the 1st and 3rd section?

I changed my decision from the 1st section to the 3rd section because I thought I would have a higher chance for the odd event than even event to happen so I could do a higher stake and see which one would happen.
